

Enhanced Opportunistic Taxable Muni Strategy

STRATEGY OVERVIEW

The Enhanced Opportunistic Taxable Municipal Strategy ("Strategy") seeks to maximize growth while emphasizing capital preservation and limiting volatility regardless of surrounding market gyrations. With a commitment to research, flexibility and an opportunistic approach to portfolio structure, the Strategy invests primarily in highly-rated taxable municipal bonds (BBB and above) across all U.S. states while targeting a duration of 3-7 years. The Strategy is compared to the Bloomberg Barclays US Aggregate Index and includes all discretionary, fee paying accounts managed to the Strategy that have account sizes greater than \$60,000. The investment strategy began in November 2015 with the composite being created in December 2019.

STRATEGY OBJECTIVE

Maximizing risk-adjusted, after-tax returns while preserving capital

STRATEGY CHARACTERISTICS

- Leverage flexibility and networks to identify price inefficiencies and overlooked segments of the market
- Customized separately managed accounts catered to each client's unique circumstances
- Far greater transparency and predictability relative to fixed income mutual funds and ETFs
- Consider callable bonds and other underutilized features to maximize portfolio structure and opportunities

STRATEGY BENCHMARK

2025-2027	28.79%	13.95%
≥ 2028	25.16%	26.80%

Key Statistics and Maturity Profile: Data for key statistics and maturity profile is calculated by MBG using constituent data provided by Bloomberg LLC. This data is comprised by dollar weighting all taxable individual bonds held in the composite accounts as of 4/30/20. More information about specific data or the formulas used in calculations is available upon request.

Strategy Benchmark: The Enhanced Opportunistic Taxable Strategy's benchmark is the Bloomberg Barclays US Aggregate Bond Index. The Index is a broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. To be included in the index, bonds must be investment grade with a maturity of greater than 1 year and depending on the type of bond (Treasury, CMBS, MBS), have a par amount outstanding of \$250mn to \$1bn.

Performance History: Gross-of-fee returns do not reflect the deduction of management fees but have been reduced by transaction costs and custodial fees. Net-of-Fee returns reflects the deduction of actual management fees, trading costs, and custodial fees. No performance-based fees are assessed. Trading costs are incorporated in performance gross and net of fees. The price the firm purchases bonds includes all mark-up or mark-downs from the broker which is reflected directly in the account. In addition, the custodian may charge fees if the trade is executed via a trade-away. The firm is also showing a Net-of-Fee return net of 30 basis points, which is the fees charged to the sub-advisor and is net of trading costs. A complete discription of the methodology for computing composite returns is available upon request.

Credit Quality Disclosure: MBG reports credit quality for individual issues based on the available credit ratings from the three primary rating agencies: Standard & Poor's, Moody's and Fitch. The rating shown is the middle rating ranked lowest to highest by the three primary rating agencies, if three ratings are available. If only two ratings are available, MBG shows the lower of the two ratings. More information about the ratings assigned to the securities in the portfolio by each ratings agency is available upon request. The ratings shown may not reflect the ratings as of the report date; ratings are updated periodically and are subject to change without notice. During periods of market volatility, ratings may change dramatically.

Modern Portfolio Theory Statistics: Modern Portfolio Theory Statistics on the fact sheet are calculated using well-defined industry standard formulas. More information about specific data or the formulas used in calculations is available upon request.

*AGG is the iShares Barclays Aggregate Bond Fund. AGG is benchmarked to the Bloomberg Barclays US Aggregate Bond Index. Data for key statistics, sector exposure and maturity profile is calculated by MBG using constituent data provided by Bloomberg LLC for the iShares Barclays Aggregate Bond Fund. Thus, it may differ from published reports by iShares or other data sources.

Other Disclosures: Past performance does not guarantee future results. Market conditions can vary widely over time and can result in a loss of portfolio value. Additional information regarding inclusion of accounts in the composite, methodology for computing composite returns, and preparing compliant presentations are available upon request.
